## Introduction

This book introduces Embedded Systems through using the Vaman framework.

#### Chapter 1

### Vaman-ESP32

## 1.1. Measuring Unknown Resistance Using ESP32

T:hrough this manual, we learn how to measure an unknown resistance through ESP32 and display it on an LCD.

#### 1.1.1. Components

| Component     | Value     | Quantity |  |
|---------------|-----------|----------|--|
| D : .         | 220 Ohm   | 1        |  |
| Resistor      | 1K        | 1        |  |
| ESP32         | Devkit V1 | 1        |  |
| Jumper Wires  |           | 20       |  |
| Bread board   |           | 1        |  |
| LCD           | 16 X 2    | 1        |  |
| Potentiometer | 10K       | 1        |  |

Table 1.1.1: Components

#### 1.1.2. Setting up the Display

1.1.1. Plug the LCD in Fig. 1.1.1.1 to the breadboard.

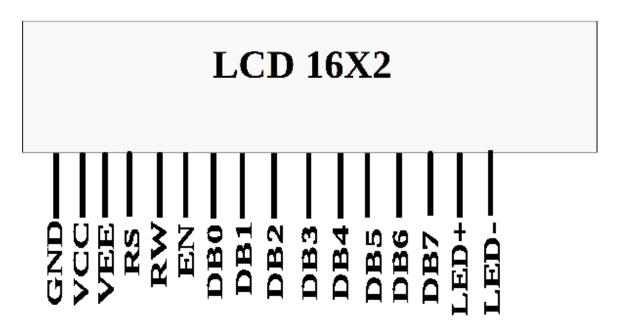

Figure 1.1.1.1: LCD pins

- 1.1.2. Connect the ESP32 pins to LCD pins as per Table 1.1.2.1. Make sure that all 5V sources are connected to the LCD through a 220  $\Omega$  resistance.
- 1.1.3. Execute the following code after editing the wifi credentials

vaman/esp32/lcd/codes/setup

You should see the following message

Hi

This is CSP Lab

1.1.4. Modify the above code to display your name.

| ESP32   | LCD<br>Pins | LCD Pin<br>Label | LCD Pin Description  |
|---------|-------------|------------------|----------------------|
| GND     | 1           | GND              |                      |
| 5V      | 2           | Vcc              |                      |
| GND     | 3           | Vee              | Contrast             |
| GPIO 19 | 4           | RS               | Register<br>Select   |
| GND     | 5           | R/W              | Read/Write           |
| GPIO 23 | 6           | EN               | Enable               |
| GPIO 18 | 11          | DB4              | Serial<br>Connection |
| GPIO 17 | 12          | DB5              | Serial<br>Connection |
| GPIO 16 | 13          | DB6              | Serial<br>Connection |
| GPIO 15 | 14          | DB7              | Serial<br>Connection |
| 5V      | 15          | LED+             | Backlight            |
| GND     | 16          | LED-             | Backlight            |

Table 1.1.2.1: Make sure that all 5V sources are connected to the LCD through a 220  $\Omega$  resistance.

#### 1.1.3. Measuring the resistance

- 1.1.1. Connect the 5V pin of the ESP32 to an extreme pin of the Breadboard shown in Fig. 1.1.1.1. Let this pin be  $V_{cc}$ .
- 1.1.2. Connect the GND pin of the ESP32 to the opposite extreme pin of the Breadboard.
- 1.1.3. Let  $R_1$  be the known resistor and  $R_2$  be the unknown resistor. Connect  $R_1$  and  $R_2$  in series such that  $R_1$  is connected to  $V_{cc}$  and  $R_2$  is connected to GND. Refer to Fig. 1.1.3.1
- 1.1.4. Connect the junction between the two resistors to the GPIO34 pin on the ESP32.

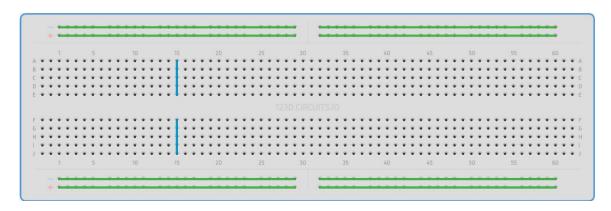

Figure 1.1.1.1: Breadboard

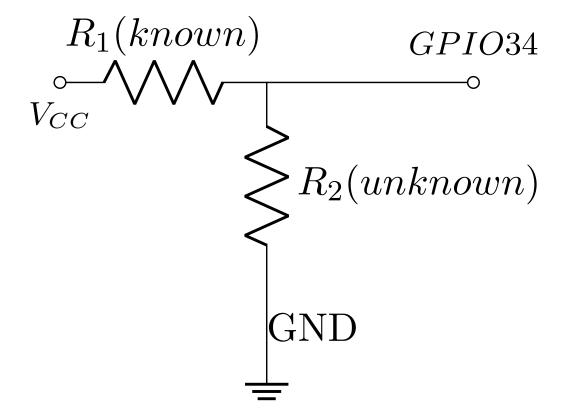

Figure 1.1.3.1: Voltage Divider

- 1.1.5. Connect the ESP32 to the computer so that it is powered.
- 1.1.6. Execute the following code after editing the wifi credentials

vaman/esp32/lcd/codes/resistance

#### 1.1.4. Explanation

- 1.1.1. We create a variable called analogPin and assign it to 0. This is because the voltage value we are going to read is connected to analogPin GPIO34.
- 1.1.2. The 12-bit ADC can differentiate 4096 discrete voltage levels, 5 volt is applied to 2 resistors and the voltage sample is taken in between the resistors. The value which we get from analogPin can be between 0 and 4095. 0 would represent 0 volts falls across the unknown resistor. A value of 4095 would mean that practically all 5 volts falls across the unknown resistor.
- 1.1.3.  $V_{out}$  represents the divided voltage that falls across the unknown resistor.
- 1.1.4. The Ohm meter in this manual works on the principle of the voltage divider shown in Fig. 1.1.3.1.

$$V_{out} = \frac{R_1}{R_1 + R_2} V_{in} (1.1.4.1)$$

$$\Rightarrow R_2 = R_1 \left( \frac{V_{in}}{V_{out}} - 1 \right) \tag{1.1.4.2}$$

In the above,  $V_{in} = 5V$ ,  $R_1 = 220\Omega$ .

1.1.5. Repeat the exercise with another unknown resistance.

# 1.2. I2C Communication Between ESP32 and Arduino

T:hrough this manual, we will learn how to setting up the ESP32 as a Master and Arduino as a Slave using I2C protocol.

#### 1.2.1. Components

| Component  | Value     | Quantity |  |
|------------|-----------|----------|--|
| ESP32      | Devkit V1 | 1        |  |
| Arduino    | UNO       | 1        |  |
| Connecting |           | 30       |  |
| Wires      |           |          |  |
| LCD        | 16 X 2    | 1        |  |

Table 1.2.1:

#### 1.2.2. Setting up the Master and Slave

1.2.1. Connect the ESP32 pins to Arduino pins as per Table 1.2.1.1.

| I2C | ESP32   | Arduino |
|-----|---------|---------|
| SDA | GPIO 21 | A4      |
| SDC | GPIO 22 | A5      |
|     | VCC     | VCC     |
|     | GND     | GND     |

Table 1.2.1.1:

1.2.2. Connect the ESP32 pins to LCD pins as per Table 1.2.2.1.

| ESP32      | LCD<br>Pins | LCD<br>Pin<br>Label | LCD Pin Description  |
|------------|-------------|---------------------|----------------------|
| GND        | 1           | GND                 |                      |
| 5V         | 2           | Vcc                 |                      |
| GND        | 3           | Vee                 | Contrast             |
| GPIO<br>19 | 4           | RS                  | Register<br>Select   |
| GND        | 5           | R/W                 | Read/Write           |
| GPIO<br>23 | 6           | EN                  | Enable               |
| GPIO<br>18 | 11          | DB4                 | Serial<br>Connection |
| GPIO<br>17 | 12          | DB5                 | Serial<br>Connection |
| GPIO<br>16 | 13          | DB6                 | Serial<br>Connection |
| GPIO<br>15 | 14          | DB7                 | Serial<br>Connection |
| 5V         | 15          | LED+                | Backlight            |
| GND        | 16          | LED-                | Backlight            |

Table 1.2.2.1:

1.2.3. Configure Arduino Uno as a Slave using the following code.

 $vaman/esp32/I2C/codes/I2C\_Sender\_Arduino/src/main.cpp$ 

1.2.4. Now configure ESP32 as a Master using the following code.

 $vaman/esp32/I2C/codes/I2C\_Reciever\_ESP32/src/main.cpp$
